## Case Study: Acoustics Management

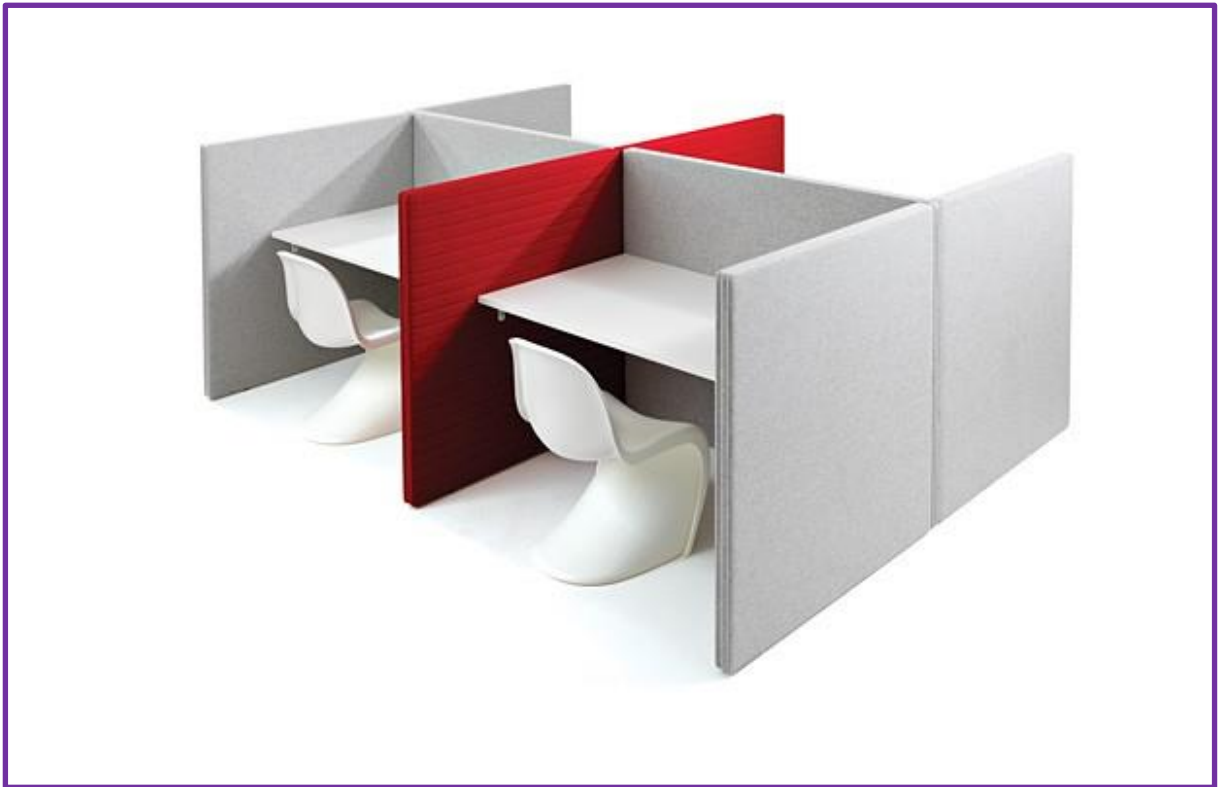

The open spaces, hardwood floors and high ceilings of a warehouse conversion are an ideal candidate for an acoustics solution.

The downside is that, without careful design consideration, it can end up being a very noisy place to work!

## The Solution: The Comfy Workplace Khamsin range

The hardwearing, modular Khamsin screens can be configured in countless ways. Their substantial 60mm profiles not only look great - especially in a large-scale office - but they also have brilliant acoustic properties to help manage unwanted echoes.

## Khamsin Case Study

We put all this to the test for a project for an impressive, converted building in the North East. With little to absorb the sound, this vast workspace needed screens that would not only complement the brand colours of the new occupiers and industrial design style of the space, but also improve the overall acoustics.

There were other considerations we needed to address too. The screens had to work with existing desking and everything needed to be user-friendly to install without us coming to site (due to Covid restrictions).

**Khamsin was the perfect choice, combining acoustics, functionality and style.**

- Chunky 60mm profile
- Hardwearing fabric screens
- Excellent acoustic properties
- Upholstered in contrasting coloured fabrics to match brand colours
- Easy to install and securely fitted

As is often the case, the requirements further evolved as the job progressed. To make the space more Covid-secure, the client requested that we accommodate their own acrylic visors on top of the Khamsin screens.

This request was met and we designed and fabricated brackets to accommodate the clear, easy to clean, visors. These then slotted effortlessly on top of our screens, increasing their overall height without disrupting visibility across the office.

## User Friendly

Given that this was the first time this client had specified Khamsin, the installation was kept super simple. We numbered each individual screen and gave clear step-by-step instructions for every cluster... and we're happy to say that it went without a hitch!

Bespoke brackets affixed the screens to each desk configuration, the Khamsin screens were fastened together and acrylic visors were added on the end pieces.

Khamsin's clever concealed linking mechanism allows adjacent screens and corner pieces to be securely slotted together. The result is a very stable solution that looks great too.

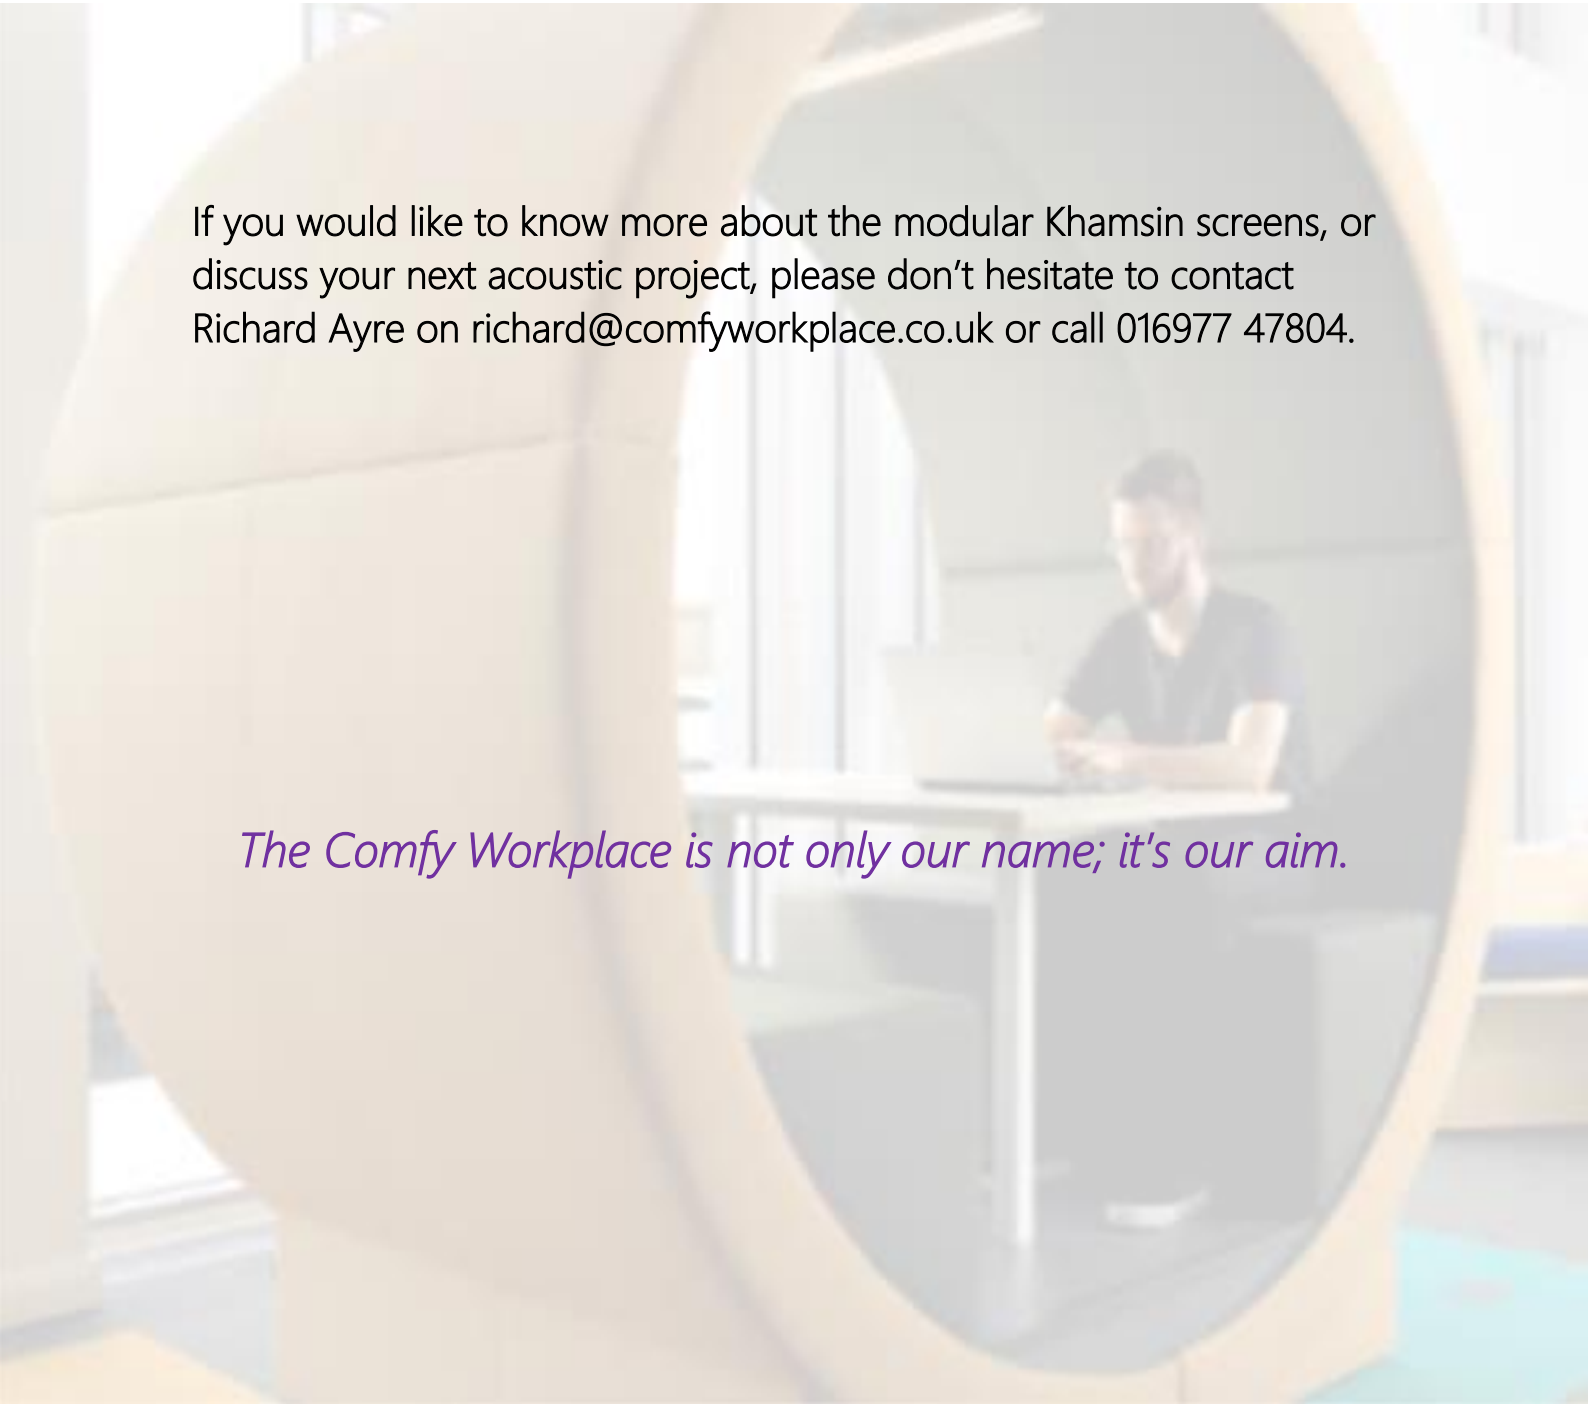

## Problem Solving

Creative thinking is what we do best at The Comfy Workplace, and problem solving is a fundamental part of any bespoke project.

Getting the right dimensions for bespoke screens and ensuring the install is self-explanatory, had called for extra ingenuity from everyone in our team and our manufacturer's team.

A background image showing a man sitting at a desk inside a modern, circular office pod. The pod has a large circular opening, and the man is visible through it, working on a laptop. The pod is made of light-colored wood or a similar material. The background is slightly blurred, showing other office furniture and a bright, airy environment.

If you would like to know more about the modular Khamsin screens, or discuss your next acoustic project, please don't hesitate to contact Richard Ayre on [richard@comfyworkplace.co.uk](mailto:richard@comfyworkplace.co.uk) or call 016977 47804.

*The Comfy Workplace is not only our name; it's our aim.*
